About Me

Integrated M.Tech Computer Science student passionate about software development, problem solving, and AI-driven solutions. Experienced in building web applications and hackathon prototypes focused on real-world problems such as financial management, travel planning, and social empowerment. Actively improving data structures, algorithms, and development skills through coding challenges and projects.

WORK EXPERIENCE

Participated in multiple hackathons as a developer, collaborating with team members to build innovative web-based solutions. Assisted in brainstorming ideas and implementing solutions within tight hackathon timelines. Worked on designing user-friendly interfaces and basic functionality for prototype applications. Continuously improving programming, problem-solving, and web development skills through project development.

PROJECTS

1. Women Empowerment Platform

- Developed a web platform focused on women safety, awareness, and empowerment resources.
- Implemented features to provide information about legal rights, emergency contacts, and support services.
- Built during a hackathon to promote social impact using technology.

2. UpYield – Financial Banking Platform

- Developed a finance management and digital banking concept platform to help users track savings and investments.
- Focused on improving financial literacy and smart money management.
- Designed during a hackathon to explore fintech-based solutions.

3. Adaptive Vehicle Headlight System

- Developed it to automatically adjust headlight direction based on vehicle movement and road conditions. Designed to improve night driving safety and visibility on curves and turns.
